

Before

After (post-sand)

Post Bedding in Period

The **REPLAY REJUVENATION**[®] process restores sand-filled/dressed pitches to an 'as new' condition, in terms of performance & drainage - often substantially increasing the playing life of the surface for a fraction of the cost of a new carpet.

Your 'Rejuvenation' package will include:

Removal of surface debris, leaves & litter.

De-compaction of the carpet allowing for the extraction of contaminated infill using compressed air via our unique specialist machine (small and large machines available depending on access).

Straightening & cleaning of the carpet fibres untangling & restoring them to vertical.

Repairs identified & re-glued where necessary (up to 50m included free of charge).

Refill of the surface with new and clean specialist sports grade infill sand to the original specification. Restores the surface to an 'as new' condition for drainage & performance.

On completion of the **REPLAY REJUVENATION**[®] process, we would strongly recommend a **REVIVE** Maintenance Service Agreement, contact our **sales team** for more information: **(01636) 640506** or **sales@replaymaintenance.co.uk**
